

MASTER

Tejido compuesto por hilos de poliéster HT 1100 dtex con tratamiento anti-capilaridad, recubierto de PVC, impermeable translúcido reversible, con acabado liso brillante lacado a 2 caras.

Destaca por el tratamiento anti-capilaridad, con el que cuentan sus hilos de poliéster, que evitaría la absorción de agua en caso de desprendimiento accidental del recubrimiento de PVC, debido a condiciones meteorológicas adversas, incrementando considerablemente la durabilidad del tejido.

Sus clasificaciones de reacción al fuego M2 y B-s2,d0 lo hacen apto para su uso en el sector terciario.

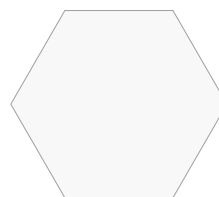

Especialmente diseñado para la confección de pérgolas, cubriciones textiles y arquitectura textil exterior.

Fabric made of 1100 dtex polyester HT yarn, with an anti-capillary treatment coated in PVC, waterproof, translucent, reversible, with a smooth gloss finish coated on both sides.

One of the strengths of this fabric is the anti-capillary treatment of the polyester yarn, which prevents water absorption by capillarity in cases where a small piece of the PVC coating becomes detached, for example as a result of a bump due to adverse weather conditions, preventing damp spots from spreading across the surface of the fabric and considerably increasing its lifespan.

Its M2 and B-s2 d0 reaction to fire classifications make it suitable for use in the tertiary sector.

Epecially designed for the construction of pergolas, textile canopies and external textile architecture.
